Professional Statement

Miguel Viana

Step One - Strengths

Analytical thinking: I practice examining security alerts and comparing evidence before drawing conclusions.

Continuous learning: I am building my cybersecurity knowledge through university studies, the Google Cybersecurity Certificate, and TryHackMe labs.

Technical communication: I am developing my ability to explain investigation findings clearly and document the reasoning behind my decisions.

Step Two - Values

Protecting people and their information from online threats.

Acting responsibly and honestly when handling information and reporting security findings.

Step Three - Clarifying Questions

1. What most interests me about cybersecurity?

I am particularly interested in security operations and investigating suspicious activity. I enjoy examining emails and logs, identifying signs of phishing, and understanding whether an alert represents a real threat.

2. Who is the audience for my professional statement?

Cybersecurity recruiters and hiring managers seeking interns or junior analysts, particularly for Security Operations Center positions.

3. How can my strengths, values, and interests support an organization's security goals?

My analytical approach and commitment to learning can help me investigate alerts carefully and develop the skills needed to support incident response. My focus on responsible information handling and clear documentation can also help security teams make informed decisions.

Professional Statement

I am a cybersecurity student working toward a career in security operations. Through hands-on labs, I am developing skills in phishing investigation, security alert triage, and log analysis using Splunk. I enjoy working through evidence to understand suspicious activity and explain my findings clearly. Protecting people and their information motivates me to keep learning and build the skills needed to help organizations detect and respond to threats.
